# XRY Certification

XRY
Certification

## Course Overview:

XRY Certification is the quintessential course when it comes to data extraction in mobile device forensics. Whether a novice in the field or a seasoned professional, students walk away with the skills and knowledge needed to tackle mobile device forensics using XRY.

This three–day course introduces you to industry standards and best practices when it comes to the identification, collection, and preservation of digital evidence. You will be guided through all facets of XRY from setup to extraction. You will leave confident in your ability to effectively collect data from various mobile devices as well as cloud data and data acquired from other sources.

Book now to get certified in today's fastest and most comprehensive mobile device extraction tool and get started on your path to becoming a MSAB Certified Forensic Professional.

## Key course takeaways:

- Tailor XRY to your organization defining unique setup and storage routines
- Explore proper network isolation methods to ensure data protection
- Manage speed vs data density with Advanced File Decoding and Content Recognition
- Understand the secure XRY file format and how it maintains integrity and chain of custody
- Become proficient in extracting data logically and physically from various devices including SIM cards, memory cards, feature phones, and smart phones
- Utilize XRY Photon to extract data from popular Android apps such as WhatsApp and Signal
- Cloud data extraction using XRY Cloud
- Importing and decoding mobile device images from third party tools such as Graykey

### Delivery Method

- Instructor-led Classroom

### Course length

24 hours

### Pre-Requisites

None
